

## We are RECO Commercial Systems

### The Water Heater and Pressure Vessel Experts

We are recognized as one of the country's leading suppliers of water heaters and pressure vessels for the commercial, institutional, industrial, pulp and paper, oil and gas, power generation and chemical industries. In fact, it is hard to find an industry, market, or application today that doesn't rely on the quality, safety, and convenience that RECO Commercial Systems brings to their most critical services and processes.

## Domestic Water Heaters

### ThermoMaster Domestic Water Storage Heaters

By combining exact storage requirements for peak load demands with a forced circulation recovery section, the Thermomaster is excellent for commercial, industrial and institutional service. Integral recirculation assures a full supply of hot water on demand.

### HX2 Semi-Instantaneous Water Heater

The HX2 is RECO Commercial Systems' next generation of compact, semi- instantaneous water heaters that can use steam or boiler water as the heating medium.

### ThermoPlatePAC

A fully packaged indirect-fired water heater that uses boiler water from a condensing boiler as the heating source. Utilizing a plate type heat exchanger, the system provides efficient heat transfer at boiler water temperatures.

## Tanks and Pressure Vessels

### Hydro-Pneumatic Tanks

Reco CS hydro-pneumatic tanks are designed to store both water and compressed air. Without an internal bladder to separate the two, the compressed air is in direct contact with the stored water and acts to either absorb or exert pressure on the water.

**Storage up to 30,000 gallons.**

### Thermal Energy Storage

Thermal energy tanks are reservoirs for storing energy in chilled water cooling systems. Water has a better thermal transfer than air. Thermal energy storage has been around for decades and continues to prove an efficient and economical storage method.

### ASME Tanks and Vessels

Filter tanks, air receivers, blow down tanks, flash vessels, condensate tanks, and accumulator tanks, built to your specifications.

### Domestic Hot and Cold Water Storage Tanks

Standard tanks are carbon steel vessels with a 5/8" layer of cement, manufactured from NSF certified materials. It provides excellent, long-term protection and is fully field repairable.

## Steam Generators

### Clean Steam Generator

High quality components for optimal performance, engineered to meet specific steam needs for industrial and commercial facilities.

## Heat Exchangers

### Heat Exchangers

Shell-and-tube type heat exchangers transfer heat by direct surface contact. Standard and custom configurations available.

## Tube Bundles

### Replacement Tube Bundles

Available in single and double wall, in copper, copper-nickel and stainless steel, available in 2-pass or 4-pass.
